

File: DocTAceSounds1.zip

The archive contains a bunch of sounds for the intriguing VST.Instrument

u-he ACE -> <http://www.acesynth.com/>

Installation: unzip the file and copy the contents to your ACE preset folder

Warning: the file contains a self destroying mechanism that overwrites all your ACE presets with a Jingle-Bells-Sound if you use them for more than 4 weeks without sending a short feedback to bluemusic@web.de

I've tried to sort the sounds into categories, but you shouldn't take these too serious. I hope you won't be bothered by my weird description of modulations. Just try them, preferably all at a time ;)
