Installation instructions:

Place the entire preset folder in one of the following places, depending on the OS you're using:

Windows

- ... \VstPlugins\u-he\Hive.data\Presets\Hive\

Mac OSX

- Global Presets: *MacHD/Library/Audio/Presets/u-he/Hive/*
- User Presets: *~/Library/Audio/Presets/u-he/Hive/*

Velocity Sensitivity:

For your convenience, most of the presets don't include velocity sensitivity, which means that every note plays at the same level and filter stage, no matter if the velocity is high or low. However, you can easily add this functionality to every preset you want to by simply adding the corresponding data to the mod matrix. See the illustration below as a reference.
