

Requires Zebra v. 2.3.1

Zebra presets by Michael Cavallo 2009

This preset pack contains 182 presets.

This preset pack also contains 81 XY remixed and arpeggiator versions from many of the 181 presets.

246 Hand drawn and morphed wave tables are also included. These tables contain 16 original waves each. The OSC's associated with these waves contain no settings.

250 Hand drawn and morphed wave tables are also included. These are the same as the above mentioned wave sets, except they contain all the OSC's settings.

Individual preset information is contained within the presets themselves. Available through clicking on the "info" button located at the top right side of Zebra's GUI. Preset information is also available in the XY Control section.

All presets make use of the Modulation Wheel.

This includes, but is not limited to, changing tune, or tone. Changing release times, and adding vibrato.

All presets have all 4 XY controllers assigned to many different modulation sources.

Almost 75% of presets contain already created arpeggiator settings.

This allows you to switch a presets mode, from poly, retrigger, or legato mode, to arpeggiator mode, and have a unique arp to use as well as the regular mode of the preset.

Almost 50% of presets contain After Touch settings.

Almost 25% of presets have extra sound source or filter source modules included.

These are in the module table, which are turned off as the default. They can be turned on to alter the sound of the preset.

All presets contain tweaked effects which are turned off as the default.

The effects found under the Global/FX tab, can be turned on to change the sound further.

### Information on using the arpeggiator mode.

The premade settings for arpeggiator mode also include the ability to use the premade settings of the arp mods. The arp mods are controlled through the mod matrix. The arp mod knobs are set to 0 as default. You can change the settings of these to influence the arp in different ways. Some arp mod control knobs are located in different places. The info button will tell you where they are. Not all the arpeggiator able presets include the arp mods.

The premade arpeggiator settings could not be used on presets with long release times or slow attack times. Some presets Modulation Wheel and XY pad settings do change the release times, from short to long. This will cause memory overload if you are using arpeggiator mode at the time.

Thanks for downloading my Zebra presets, and I hope you enjoy them.

Thanks to Urs for design of such great software. Thanks to Howard Scarr and Michael Kastrup for helping me in learning to use Zebra.

Thanks to all the people on the KVR Audio forum. My screen name is MCnoone on there, if you need to ask a question feel free to PM or email me.

Donations can be made by visiting my donations web page here: <http://mcnoone22.weebly.com/>
